LETTER OF RECOMMENDATION

Regarding: Garno Tech — Course catalog and enrollment website

To whom it may concern,

Our organization runs short professional courses with changing dates, capacities, and delivery formats. We wanted prospective learners to understand the options quickly and submit enrollment requests without navigating a complicated platform.

Garno Tech delivered a course catalog with filters, individual program pages, and a streamlined enrollment flow. Their team also created an administrative interface for updating schedules and course details. This removed the need to request small website changes from an external developer every week.

They were responsive when we discovered a few operational exceptions during testing, particularly around courses with multiple sessions. The final result is clear for users and practical for the people who manage it. We valued their willingness to adapt the solution to the way our team actually works.

Kind regards,

Program Director
Morrowfield Learning
