LETTER OF RECOMMENDATION

Regarding: Garno Tech — Public website and event registration

To whom it may concern,

We needed a new public-facing website for our programs, community events, and volunteer opportunities. As a small nonprofit, we had to be careful about cost and ongoing maintenance. Our previous content was scattered across several services and difficult to keep consistent.

Garno Tech organized the information into a single website and implemented straightforward registration forms for events and volunteer interest. They made sensible recommendations about what to build now and what could continue using existing third-party tools. This kept the scope proportionate to our needs.

The team explained technical decisions in plain language and documented how staff could update pages after launch. We appreciated that they treated accessibility, clarity, and maintainability as everyday requirements rather than optional extras. The experience was professional from the initial discussion through handover.

Kind regards,

Executive Coordinator
Eastbank Community Initiative
